

PIPELINE CONDITIONING

ODORIZATION + CONDITIONING SERVICES

WHO WE ARE

Pipeline Conditioning is a national field services provider specializing in natural gas odorization, pipeline conditioning, and commissioning. Every project is executed by full-time, degreed, and OQ-certified engineers.

WHY IT MATTERS

- It's the Law: 49 CFR §192.625 requires gas to be readily detectable by smell - we ensure compliance
- Avoid Costly Mistakes: Poor odorant handling can lead to shutdowns, fines, and emergency responses
- Protect Public Trust: One odor complaint in the wrong place, like a school or hospital, can trigger PR nightmares and legal exposure
- Stay Focused: Let your team concentrate on operations while we handle the sensitive odorant work quietly and correctly
- Consistent Execution: Our proven process keeps your project on track and out of the headlines

HOW TO GET STARTED:

For accurate pricing please share:

- ✓ Pipe diameter
- ✓ Operating pressure
- ✓ Total length of the line
- ✓ Min, max & avg flow rates
- ✓ General location

WHAT WE DO

We support transmission and distribution operators across the US with:

- Temporary Odorization (odorless execution to prevent customer complaints)
- Line conditioning ("pickling") for steel and PE lines
- Commissioning of YZ odorizers and PRS Units
- Temporary regulation setups
- Odorant evacuation and decommissioning
- Combustion work
- Emergency and urban-friendly deployments

PIPELINE PROJECTS

- Midwest Pipeline Commissioning: Conditioned a 12-inch steel line for odorant service, cutting project duration in half
- Southwest Lateral Tie-In: Supported temporary odorization and regulation during new construction, decommissioned an outdated permanent odorization station, and commissioned a new system in its place
- Urban High-Rise Connection: Provided PE conditioning and commissioning in a dense downtown corridor with zero public complaints
- Emergency Over Odorization Response: Quickly mobilized to resolve an over odorization event, restoring compliance and preventing further public concern
